ABOUT US

Effective Fire Protection Solutions

Total Design Passive Fire Solutions provide passive fire protection options using Envirograf fire-resistant materials. We work with architects, designers, approved inspectors and fire risk assessors, to achieve Building Regulations compliance within the guidelines set out by the Approved Documents. From your enquiry through to completion, we make sure we follow and record the installation process and sign off the project to provide quality assurance and peace of mind.

With the support of our in-house Fire Risk Assessment trained Project Managers and Health & Safety Manager, we can recommend the most cost effective fire protection product to be installed based on your unique circumstances. Within our business we have skilled operatives who are trained by the fire protection product manufacturer to ensure it is not only the right product but is correctly installed.

We have carried out Passive Fire Protection to over 150 units throughout the UK and are certified by Envirograf, the UK's leading Passive Fire Protection manufacturer, as an approved installation company.

If you require Passive Fire Protection to your premises such as offices, retail, hospital, care homes, houses in multiple occupation, flats and hotels, we can assist you. Our teams can provide support with single site installations or multiple sites, with careful programming to keep any disruption to a minimum.

Fire Risk Assessment

Intumescent Paints
& Coatings

Fireboard Encasement

Floor & Ceiling Partitions

Fire Barriers &
Smoke Curtains

Fire Stopping
& Air Sealing

Annual Fire Risk
Assessment Review

Fire Detection &
Alarm System Installation
& Services

Take the risk out of your fire protection systems. We will carry out a comprehensive assessment for you and provide you with a detailed report to work from.
